OPENTYPE UNDECAPRENYL-PHOSPHATE GALACTOSEPHOSPHOTRANSFERASE.

ACTINOBACILIUS pleuropheumoniae (Hoemophilus pleuropheumoniae).

Bacteria: Proteobacteria: gamma subdivision: Pasteurellaceae:

Actinobacilius.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "Complete genome sequence of the alkaliphilic bacterium Bacillus halodurans and genomic sequence comparison with Bacillus subtilis."; nucleic Acids Res. 28:317-4331(2000).

consists of 44 conclips. The true order of the pieces 1s not known and their order in this sequence record is arbitrary dags between the conclips are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved 1065 contig of 1065 bp in length 1066 1165: gap of 100 bp 1073 3813 3812: gap of 100 bp 108 3713 3812: gap of 100 bp 109 568 5765: gap of 100 bp 109 5768 3737: contig of 1855 bp in length 109 5768 3737: contig of 100 bp 109 5768 3737: contig of 100 bp 109 5768 3737: gap of 100 bp 109 5768 3737: contig of 1070 bp in length 109 5768 3737: contig of 1070 bp 109 5768 3737: contig of 1070 bp 109 5768 3737: gap of 100 bp 109 5768 3737: contig of 2072 bp in length	.mit.edu reads of reads of reads t 040 t 030 t 020 t 020 t 020	Norman, C.H., O'Connor, T. It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                  as soon as it is available and the accession number will be preserved.

Where the sequence is ambiguous, there is a monotation using the funsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Dan., BMBL, Sw., SMISSPROT, Tr., TREMBL, Mp., WORMPEP, Information on the WORMPEP database can be found at the MORMPEP database can be found at the MORMPEP database can be found at the MORMPEP of the MORMPEP database can be found at the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known such as compressions and repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Quality:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  VECTOR: pBACe3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RP11-102P23 is from the library RPCI-11.1 constructed by the group of Pieter de Jong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       was generated from part of bacterial clone contigs of human chromosome X. constructed by the Sanger Centre Chromosome X Mapping Group, Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            On Feb 5, 2001 this sequence version replaced gi:12329354. 
During sequence assembly data is compared from overlapping clones. 
Where differences are found these are annotated as variations 
together with a note of the overlapping clone name. Note that the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      requests: clonerequest@sanger.ac.uk

It currently consists of 6 contigs. The true order of the pieces 'is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is the entire insert of clone RP3-380B8 The true left end of clone RP1-525021 is at 141303 in this sequence. The true right end of clone RP1-182016 is at 57138 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.asonger.ac.uk/HGP/Chr6
RP3-98088 is from the library RPGT-3 constructed at the Roswell
Park Cancer institute by the group of Pieter de Jong. For further

Galbagan, J., Gardyna, S., Grant, G., Hagos, B., Heaford, A., Horton, L., Lohozard, J.C., Johnson, R., Jones, C., Kann, I., Kardtas, A., Klein, J., Lahozard, J., Lieu, C., Locke, K., Macdonald, P., Marquis, N., Klein, J., McCanghiln, J., Mardrim, J., McCardyn, J., Maylor, J., Norman, C.H., O'Connor, T., O'Connell, P., Peterson, K., Pollara, V., Rilcy, R., Roy, A., Santos, R., Severy, P., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Talamas, J., Teafaye, S., Tirrell, A., Vassiliev, H., Vo, A., Wheeler, J., Wu, X., Wyman, D., Ye, W. J., Zimmer, A., and Zody, M.

Submitted (22-007-1999) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA All repeats were identified using RepeatMsker: Smit, A.F.A. & Green, P. (1996-1997)

NOTE: This is a "working draft' sequence, it currently consists of 54 contigs. The true order of the pieces is not known and their order in this sequence record is a rishitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

2094: contig of 2094 bp In length

TITLE JOURNAL

Submitted (11-JUL-2001) Human Genome Sequencing Center, Department of MoLecular and Human Genetics, Baylor Collige of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jul 11, 2011 this sequence version replaced gi:12656690.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this cione. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and

local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green

unpublished.) for Human and Mouse Sequences.
Genes and Region of Sequence similarity are identified by BIAST (Nuc. Acids Res. 25:388-3402) similarity (expect < 10-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum of standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguittes or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguittes. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

OUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards estimated error rate less than 1 per 10,000 bases.

Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrites can be found at URL: http://gc.bom.tmc.cdu/808/quality.info/genbank.annotation
